Key Revenue Metrics at a Glance

4.55

Avg Fee by Month

Average rental fee collected per transaction
each month

26.74

Sum of Late Fees

Total late fees accumulated across all rentals by
month

404.52

Total Revenue / Month

Average monthly total revenue across the full
rental period

These three core KPIs form the foundation of the rental revenue dashboard. The average fee of **4.55** per transaction, combined with **26.74** in late fees, contributes to a monthly total revenue average of **404.52**. These figures provide a baseline for evaluating performance across genres, ratings, and individual stores.

Revenue by Genre

Genre Performance

Sports leads with 780 in total revenue, closely followed by **Action** (750) and **Comedy** (720). These three genres account for the majority of rental income. **Horror** trails at 470, representing the lowest-revenue genre in the portfolio.

Revenue spans a wide range — from Sports at 780 down to Horror at 470 — a difference of 310. This gap highlights an opportunity to investigate what drives higher performance in top genres and whether underperforming genres like Horror can be repositioned or promoted to close the gap.

Revenue by Movie Rating

Family-Friendly Dominates

PG-rated films generate the highest revenue at 24.72% (1.18K), followed by **G-rated** at 22.54% (1.08K). Together, family-friendly ratings (PG + G) account for nearly **47%** of total revenue.

Revenue declines progressively with more restrictive ratings — **PG-13** (19.15%), **NC-17** (18.06%), and **R** (15.53%) — suggesting broader audience appeal drives stronger rental performance. This pattern indicates that stocking a larger proportion of family-friendly titles may maximize overall revenue.

Monthly Revenue Trends

Revenue peaks in **July at 480** — the strongest month by a significant margin — and bottoms out in **April at 330**, a 150-point swing. The summer months (June–August) show consistently strong performance, while early spring (March–May) trends lower. This seasonality suggests promotional campaigns and inventory planning should be intensified ahead of the summer peak and during the late fall months (October–November) to sustain revenue through the weaker spring period.

Customer Analytics: Store Distribution

Store B

232 customers — the highest share across all four stores

Store D

202 customers — second-largest customer base

Store A

200 customers — nearly equal to Store D

Store C

199 customers — the smallest but closely matched

Customer distribution across stores is remarkably balanced. **Store B** leads with 27.85% (232 customers), while Stores A, C, and D are nearly identical — each holding roughly 24% of the customer base. The narrow spread between the largest and smallest store (just under 4 percentage points) indicates consistent market reach across locations, though Store B's slight edge may reflect stronger local demand or foot traffic worth investigating further.

Rental Duration & Rating Insights

Revenue by Rental Days

Store Ratings Distribution

Longer rentals generate more revenue — **6-day rentals** produce 720 vs. 620 for 2-day rentals, a 100-point difference. Encouraging extended rental periods could be a direct lever for revenue growth. Meanwhile, the store's rating inventory mirrors customer revenue patterns: **PG (248)** and **G (222)** titles dominate, together representing nearly half of all rated inventory. This alignment between stock composition and revenue share reinforces the business case for prioritizing family-friendly content in purchasing decisions.

Genre Revenue vs. Rental Volume

Rental Frequency vs. Revenue

Action leads in both rental volume (190 rentals) and revenue (950), confirming strong demand. **Comedy** (150 rentals, 750 revenue) and **Drama** (130 rentals, 650 revenue) follow a clear downward trend.

Notably, **Sports** generates the lowest revenue (480) despite a moderate rental count (100), suggesting lower per-rental value. This scatter plot reveals a strong positive correlation between rental frequency and total revenue — genres that are rented more often consistently produce higher income, making rental volume a reliable predictor of genre-level performance.

Genre Revenue: Treemap View

This treemap provides an alternative view of genre revenue distribution. **Action** dominates at 350, more than triple **Horror's** 100. **Comedy** (250) and **Drama** (200) form a solid middle tier, while Sci-Fi, Sports, and Family are clustered equally at 150 each. The visualization makes it easy to see where the portfolio's revenue is concentrated and where there may be room to grow — particularly for Horror, which occupies the smallest share. Comparing this view with the bar chart in Section 3 helps validate that Action and Comedy consistently rank at the top regardless of visualization method.

Revenue Optimization: Top Films & Opportunities

Top Films by Revenue

Key Takeaways

Stock More Action & Sports

Top revenue genres — prioritize inventory and promotions.

Promote PG & G Titles

Family-friendly ratings drive ~47% of revenue — expand selection.

Encourage Longer Rentals

6-day rentals earn 100 more than 2-day — incentivize extensions.

Boost Spring Revenue

April is the weakest month (330) — run targeted campaigns.
